

Fluxo: /v1/sync-transport-order/confirm-so-statement

- 1) SAP chama endpoint em sap-integration (SyncToController.sapStatementSync)
- 2) SyncToService.sapStatementSync separa por target:
 - BR20: fluxo de pecas
 - BR10/BR40 com guid: fluxo veiculo update
 - BR10/BR40 sem guid: fluxo veiculo create

Fluxo BR20 (pecas)

- 3) saveBatchInvoiceByPart
- 4) Busca PDF/XML no MasterSaf
- 5) Atualiza SapSoMirror e status de sales order
- 6) Salva itens de invoice
- 7) Opcional: saleTransportOrderClient.receiveSapInvoice

Fluxo veiculo update (guid preenchido)

- 8) processVehicleSapStatementUpdate
- 9) Busca PDF/XML no MasterSaf e parse do XML
- 10) Resolve channel/warehouse (fromId/told)
- 11) Salva invoice item
- 12) Chama retailOrderClient.receiveSapInvoice

Fluxo veiculo create (guid vazio)

- 13) processVehicleSapStatementCreate
- 14) Busca PDF/XML no MasterSaf e parse do XML
- 15) Monta ReceiveSapNfeDto
- 16) Chama inventoryTransportRequestClient.receiveSapNfeToProcessTransportRequest

Retorno

- 17) Se alguma etapa critica falha: rollback e SapResponseBean com erro
- 18) Se tudo ok: SapResponseBean.successFactory
